

1. The main findings of this lab are that while UVA is ahead of the average college in terms of foreign gifts received, when compared to its peers, they are receiving less money and total gifts. In order to increase the amount of gifts UVA receives, they must target countries which haven't given gifts to UVA, but have demonstrated a willingness to give to others. I recommend that UVA targets Saudi Arabia, China, and Canada as new countries who would potentially give us new foreign gifts.
2. The results of my initial analysis show that Qatar gives the most money to universities while England gave the highest amount of gifts. Bermuda gives the largest gifts. In terms of universities, Carnegie Mellon receives the highest amount of money from foreign gifts. UCLA had the highest number of foreign gifts. Most universities had means that were higher than their medians due to outliers donations that brought the mean up.

The relationships between countries and universities shed some light onto how some universities were able to receive so much money from gifts. For example, Qatar had the largest flow of a country to an institution, as it gave Cornell over \$100 million. Meanwhile, nearly all of Bermuda's gift giving went straight to Carnegie Mellon University.

When looking at the UVA analysis, they received more money from gifts than the median institution, but when compared to peer institutions (UNC, Duke, VT, Notre Dame), they were behind most of them in terms of total gift amount received and number of gifts. Most of UVA's gifts came from England, and the country who gifted the most money was Bangladesh. UVA received gifts from 15 different foreign countries.

3. The strategy UVA should adopt for finding new potential sources of money for UVA is by targeting Peer foreign givers. To find new sources of foreign gifts, we should look at which countries aren't giving us anything, and then compare that to the countries which are giving to our peer institutions. For example, China (gifts to 154 universities) and Canada (gifts to 122 universities) both give to all 4 of UVA's peer institutions (Duke, UNC, VT, Notre Dame), but not to UVA. This presents an opportunity to create a new pipeline.

After reviewing which countries give gifts to the most universities, it appears that Saudi Arabia, while giving the 2nd most gifts to 152 universities, doesn't give any to UVA. These 3 countries represent major opportunities for new foreign gift investment because they've already demonstrated a willingness to give to other universities. In terms of average gifts, Saudi Arabia leads with \$661,618. Next up is China with an average gift of \$503,028. Finally, Canada has an average gift of \$383,174. In order, UVA should target Saudi Arabia, China, then Canada, based on their average gifts given to other institutions. If UVA can establish relationships with these 3 countries, the gifts will likely follow.

4. UVA has a golden opportunity to increase the amount of foreign gifts it receives. 3 of the most generous foreign countries to universities give to many other universities to which

we are comparable. The opportunity to build relationships with these countries is there, as they are willing to give to many other universities. All we need to do is build those connections and show them what's so great about UVA.
